CVE154 Exam 2, Part 3

prepared by Christian Cahig for classes of A.Y. 2024-2025 S1

2024-11-12

Referring to Figure 1, the rigid tripod assembly is subject to a force $\boldsymbol{F} = 42\mathbf{i} + 17\mathbf{j} - 69\mathbf{k}$ N, supported by a ball-and-socket joint at A and by rollers at B and C.

Figure 1 The tripod assembly is supported by a ball-and-socket joint and rollers.

P1 (15 pt.) Derive a system of linear equations $\boldsymbol{Ax} = \boldsymbol{b}$ where $\boldsymbol{x}$ collects the unknown z-components of the reaction forces. Comment on the solvability of the linear system by making observations on $\boldsymbol{A}$.

P2 (10 pt.) Solve for $\boldsymbol{x}$ via Gaussian elimination. You may use any pivoting strategy.

P3 (15 pt.) Solve for $\boldsymbol{x}$ via LU decomposition. You may use any pivoting strategy.
